

## **Improving Hospital Hand Hygiene Compliance**

### **Description**

Globally, thousands of people are affected by infections acquired while receiving healthcare. Hand hygiene compliance is essential to avoid transmission of harmful germs and preventing infections. Healthcare workers, caregivers or person involved in patient care have to practice good hand hygiene. Implementing guidelines, training and education are widely used to encourage compliance. Devices such as Biovigil are also designed to help healthcare workers comply with hand hygiene. However, such solutions have their limitations.

### **Desired technical features**

To ensure a high compliance rate, it will be good to have an intuitive system. The solution deployed hospital wards with multiple beds and in nursing homes. We welcome collaboration with industry partners/academic/research institutions and would like to work together to brainstorm other solutions and proposals.

### **Business model**

- Business Collaboration (Joint Venture, Distribution)
